Failed Wheel Bearing Caused Norfolk Southern Train Derailment in East Palestine, Ohio

DERAILMENT

On Feb. 3, 2023, a Norfolk Southern freight train derailed in East Palestine, a community of approximately 5,000 people, located in northeastern Columbiana County near the Ohio-Pennsylvania border. Twenty of the cars contained hazardous materials.

DERAILMENT

The accident quickly became the focus of the community, and eventually, the entire country. All eyes were on the emergency response, train safety practices, public health impacts and how this information was shared.

EMERGENCY RESPONSE

ER's incident operations focused on containing the hazardous materials, along with measures to move impacted soil and water. ER used data analysis to refine the strategies until the site could transition to abatement, removal, and disposal of the material.

EMERGENCY RESPONSE

Ohio EPA's emergency responders were on scene hours after the derailment, helping the first responders. Local, state, and national organizations quickly organized a Unified Command to ensure communication was clear and to coordinate response. The site remains under the Unified Command system as of August 2023.
